PUBLIC NOTICE

INTENT TO APPLY HERBICIDES

Green Mountain Power Corporation, 2152 Post Rd Rutland, Vermont 05701 has applied for a permit from the Vermont Secretary of Agriculture to apply herbicides. All herbicides will be applied by ground-based, hand-held equipment. This notice constitutes a warning to residents along the right-of-way that water supplies and other environmentally sensitive areas near the right-of-way should be protected from spray and that it is the resident's responsibility to notify the contact person of the existence of a private water supply near the right-of-way. The contact person at GMP is Jarod Wilcox, (888) 835-4672. Further information may also be obtained from Plant Industry Division, Vermont Agency of Agriculture, 116 State Street, Montpelier, Vermont 05620-2901, telephone (802) 828-5667.

Operations will commence on or about June 9, 2025 using one or more of the following herbicides: Garlon 4 Ultra, Escort XP, Polaris, KreniteS & Arsenal Powerline.

Maintenance will be conducted on the following transmission lines in the following towns:

Lines:

GILMAN – ST. JOHNSBURY
MARSHFIELD – COMERFORD
MARSHFIELD – MONTPELIER
MARSHFIELD – MORRISVILLE

Town(s):

CONCORD LUNENBURG

Greetings from Green Mountain Power!

I'm reaching out to let you know about the planned vegetation management activities along the Transmission power line right-of-way in your area. This routine work will improve reliability and safety for GMP customers and crews who work to keep the lights on.

The upcoming work will be done over the coming months within the Transmission power line right-of-way that abuts your property. GMP coordinates work with local officials, and crews generally spend several hours in a particular area as they work their way along the right-of-way. Depending on tree growth and weather conditions, they may spend more or less time – and the amount of work will depend on the vegetation density & growth in proximity to the wires, with safety as the focus.

Work location and site conditions will vary therefore an Integrated Vegetation Management (IVM) strategy will be implemented. GMP works with qualified, contract utility arborists to execute these strategies. Work strategies include; hand cutting, mowing, and selective herbicide application (if site conditions allow).

What to expect - IVM that may occur:

- Within the right-of-way, mowing or hand cutting of tall utility incompatible plants, clearing of woody stemmed vegetation growing around poles, structures and guy wires.
- Woody stemmed compatible species growing within the Wire Zone shall be pruned in a manner that will maintain a minimum of 15 feet from conductors and fiber lines. If pruning required exceeds the maximum amount allowed to support plant health, the plant/tree will be cut at the ground.
- Within the right-of-way, during the summer months, selective herbicide application to utility incompatible plant species may occur where applicable. Applications are performed by Vermont Certified Applicators, inspected & regulated by the VT Agency of Agriculture and the GMP Vegetation Management Team.

If you have a well within 200 ft. of the Transmission Right-of-Way or if you would like to discuss the extent of the work in detail, please contact:
