

A quick look at the RAPS cont.

Prohibitions on manure application:

RAPs prohibit nutrient application to fields under conditions where runoff is likely. Application is specifically prohibited under the following conditions:

Condition	Prohibition
Winter Spreading ban	December 15—April 1
Spreading ban on Annual Cropland Subject to Flooding*	October 16—April 14 <i>* must be incorporated within 48hrs of application</i>
Soil conditions	When a) saturated, b) frozen or snow-covered, or c) on bedrock
Application rate	Application in excess of nutrient recommendations

If you have any additional questions on agricultural water quality planning, contact VAAFM :

Year

Record Keeping for Nutrient Applications

Name of Farm

Provided by:

Required Recordkeeping Information:

All farms are required by the RAPS to keep records for 5 years on nutrient applications to their fields. It is helpful for these records (e.g name of pit, stack, field, equipment etc) to match the names used in your NMP. **ALL** records must contain the following:

Location	The field name/number/location where the nutrient was applied.
Date/Time	The date and time of day of application
Nutrient Source	The type of nutrient (e.g. manure, urea, wood-ash, etc.) and the place where it came from (e.g. pit or stack name)
Weather*	The temperature and weather on the day of application (NOTE: MFOs/LFOs must also record weather on the days before and after application)
Soil conditions*	Soil moisture (e.g. dry, moist, saturated, snow-covered or frozen)
Application rate	Rate of application in tons/acre or gallons per acre. Can be calculated from (size of spreader x # loads) ÷ # acres

* see back cover for more information on conditions in which manure application is prohibited

A quick look at the RAPS

Buffer Zone Requirements for Annual Crops:

Buffer zones of perennial vegetation must be maintained between croplands and landscape features.

Landscape Feature	Required Buffer
Ditches	25 ft each side
Surface waters	10 ft each side
Surface waters (if adjacent field exhibits over 10% slope)	100 ft
Tile drain surface drains/inlets	25 ft radius

Required Manure Spreading Setbacks:

Manure application in buffer zones is prohibited. Several additional setbacks also apply, as outlined below.

Landscape Feature	Required Setback
Public water supply	200 ft
Private human water supply	100 ft
Private water supply for non-humans (if CSFO, MFO, LFO)	50 ft
